

Innovative and Driven

SIGMA Equipment, originally called Sigma Packaging, started above an Evansville garage in 2003. Company President Rob Palmer wanted to create a business that channeled his passion for engineering and packaging innovation, while contributing to the economic growth of his hometown. From a single room over a residential garage, SIGMA has grown into three large warehouses with more than 50 employees.

“I had been working in the equipment industry for several years, and I kept seeing things that I would do differently,” said Palmer. “I wanted to create a company that would disrupt the old system and create a new way of selling pre-owned equipment on the internet. When we started this business in Evansville, we were able to find great talent that has been instrumental to our success.”

In 2015, Sigma Packaging was renamed SIGMA Equipment to reflect the company’s range of equipment and services. In spring of 2017, SIGMA rebranded its asset recovery program, SIGMA Recovery. The program uses software and equipment storage to help large companies better manage their idle equipment.

“With SIGMA, I wanted to focus on reaching customers through technology,” said Palmer. Technology has been a driving force behind the company, with an IT team of developers, network specialists and analysts helping SIGMA reach its 100,000 customers.

To keep up with the ever-growing customer base, SIGMA is always looking for qualified talent to join the team. “We are an innovative company of driven people,” said HR Director Renee Palmer. “That’s part of our mission statement, and we look for innovative and driven people when we are hiring.”

SIGMA offers benefits that are competitive with larger companies, including growth opportunities, flexible PTO and paid holidays, 401(k) retirement plan, health insurance, an on-site gym and a collaborative culture.
